OBJECTIVE

Senior Software Engineer with over 7 years of experience in designing and developing critical APIs and system architectures at Capital One and E-Trade Financial. Proven track record in improving system performance by 40% through Redis Caching implementation and reducing application maintenance by 50% via Spring Boot API development. Skilled in Java, Spring Boot, AWS, Git, Cucumber, Jenkins, Docker. Seeking a challenging Senior Backend Software Engineer role to leverage my expertise in API development, system architecture, and data engineering.

EXPERIENCE

Senior Software Engineer

2020 - Present

Capital One

New York, NY

- Led team contributing to migration of 8 million customers to Capital One financial core from external bank using AWS Step Functions & Glue. Designed and owned automated behavioral testing of ETL pipelines.
- Re-architected online account opening system to handle increased demand, implementing modern technologies that resulted in a system capable of supporting 4 new checking account openings per second, improving customer experience and reducing maintenance by 50%.
- Architected, coded, and launched robust API using Java and Spring Boot for secure retrieval of tokenized customer data, handling 200 TPS with zero downtime.
- Led implementation of Redis Caching and performance testing mechanisms, resolving slow customer account data retrieval issues and boosting system performance by 40%.
- Led a team of 5 engineers, mentoring on code design and architecture, resulting in positive feedback & improved performance from tech leadership.
- Led platform team's transition from 3 legacy services to modern API development practices like behavioral testing and distributed tracing, resulting in 30% reduction in bugs and 20% increase in productivity.

Software Engineer

2018 - 2020

E-TRADE Financial

Jersey City, NJ

- Developed chatbot fulfillment service using NodeJs, enhancing user engagement by 30%, and built a content system with React, enabling non-tech business users to design chatbot content, increasing efficiency by 20%.
- Identified inefficiencies in chatbot architecture, leading to a re-design using Node.js and WebSocket, achieving 50% reduction in redundant network traffic.
- Designed and developed high volume nightly batch processes handling 10k+ transactions using Spring Boot, overcoming data consistency challenges, and eliminating 2 hours/day of manual business processes.
- Developed Java micro-services for automated reporting and ETL tasks, improving data processing speed by 30% using Spring Boot and Docker in a high-volume data environment.

SKILLS

Programming Languages

Java, C++, Python, JavaScript, TypeScript, SQL, C

Web Technologies

HTML/CSS, React, RESTful APIs, GraphQL

DevOps Tools:

AWS, Git, Jenkins, Docker, Terraform

Testing Frameworks:

Cucumber, JUnit, Mockito, Mountebank, JMeter

Frameworks/Libraries:

Spring Boot, Spark, Express.js, Django

EDUCATION

Bachelor of Computer Science, Vanderbilt University

AWS Solutions Architect, Certification
